nova szkola
international

For over 25 years, Nowa Szkoła has been creating and promoting a new look at the children's world of education. With each year we gain experience and knowledge, which we translate into higher-quality services geared towards developing the educational space.

We know very well the needs of children and teachers. Yet, in order to be absolutely sure that our offers will fully meet their expectations we consult qualified educators about each new product idea. And for the testing phase we invite children – the best experts on quality and safety.

To be competitive we have always observed certain principles. Thanks to our good planning and implementation, choice of top-quality materials and professional workmanship our products are safe for children and user-friendly for teachers.

Our priorities are always our customers' needs and transparency of business practices. By adhering to these fundamentals, we wish to strengthen our good relations with clients.

CARPENTRY SHOP

The expertise and experience of our specialists are reflected in the quality of our products.

SEWING WORKROOM

All our foam soft play shapes are produced by highly qualified seamsters and seamstresses.

PACKING

WAREHOUSE

Our warehouse is large, which allows quick and easy access to our products and hence fast order processing. Before shipment, each package is carefully checked and secured so that it can reach our customers intact.

DESIGN

It is quite a long process before a product is released. Everything starts with the concept. Then come sketches and technical drawings. Next, prototypes are created and rigorously tested. Only after that can the design be put into mass production.

Thanks to our experience we are able to shorten the long production process to several days and thus meet any short-notice challenges from our customers.

CERTIFICATION

We care about the highest standards of our furniture. The excellent quality of our products is confirmed by international certificates and awards.

rehab softplay blocks

These unique construction elements made of high-density foam help develop agility, balance and smartness – all so essential for general fitness. By allowing various combinations, the blocks are great for active play. They come in various sizes and their forms and weights are adapted to children's capabilities. Thanks to the durable and nice-looking PVC cover they are comfortable to use and easy to clean.

Squezzie seat

NS 2174

This comfy chair gently squeezes, applying soothing pressure and sensory input through the trunk. Helps align the spine for better seating posture. Enables kids to rock back and forth and improve focus during reading, listening and class time. Helps kids with sensory processing disorder, autism or ADHD Use with adult supervision.

• 80 x 25 x 76 cm

Barrel

NS 2175

Get ready for a barrel of fun! Kids roll, push, climb over and through this colorful barrel for hours of active play. Encourages motor planning, gross motor development and socialization. Foam-packed walls provide a soft cushion as kids move in and out. Durable for heavy use at schools, sensory rooms and therapy clinics. Use with adult supervision.

• size: 81 x 96, hole diam. 40 cm, age: 3+

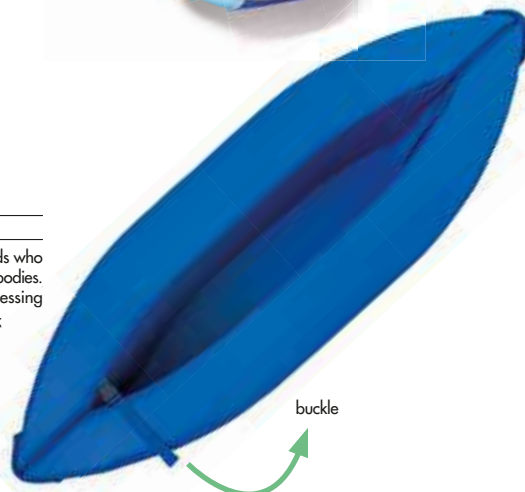

Canoe

NS 2173

Canoe is the perfect squeeze for kids who crave calming pressure around their bodies. Helps children with sensory processing disorder, autism and ADHD, Age 4+

• 56 x 170 x 49 cm

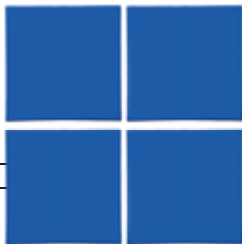

buckle

Wooden cage

The CK.PLUS system is a small wooden cage-like room for sensory integration exercises. The system is expandable with various elements to suspend on its walls and is an ideal diagnostic and therapeutic complementation in a child's neurological, orthopaedic, psychological and pedagogical development. The elements used are dedicated to various motor activities at important stages of motor development. They are important for a child to function comfortably in its environment. The system checks the inhibition of primitive reflexes, the development of visual-motor coordination and the shaping of postural reflexes. Importantly, it builds the picture of a child's gross and fine motor skills, spatial awareness, ability to cooperate and movement planning. Also, it tests motor coordination, movement copying, laterality, vestibular excitability and balance skills. The system will perfectly complement specialist diagnostics. The therapy fulfills a child's need of development through movement and through visual, aural and tactile stimulation. The child co-authors activities here and overcomes its developmental weaknesses, while the therapist selects and applies the right exercises. As a result, the system helps the child to function more efficiently, with better concentration, better chances of acquiring knowledge, more physical strength and better adaptability. System in standard version consists of:

- a wooden framework with a quick accessory attachment system;
- three types of walls (220 x 85 cm): climbing wall with grips, UP&DOWN wall, climbing wall with holes;
- a rope net
- a ceiling framework
- total size: 2218 x 2570 x 2542 mm
- weight 215 kg, maximum load 300kg
- mattresses not included.
