## Weighted aids

Weighted aids are specialist equipment in the therapy and rehabilitation of people with sensory integration disorders. While used, they gently press the body and stimulate the vestibular-proprioceptive system responsible for the 'deep touch'. Receptors in this system are found in muscles and tendons and they provide information about the orientation of our limbs in space. According to individual needs, stimulation of proprioceptors relaxes, calms down, raises the awareness of one's body, improves focus and concentration, limits self-stimulation and helps eliminate fear, anxiety or insecurity.

The aids for sensory integration are made of fabrics distinguished for colours, design and quality. They are filled with safe glass bead granulate whose amount and weight depends on the user's weight and height. 3 colour sets are offered and the colour depends on the size selected. All the products can be machine-washed at 30 degrees with light spinning, without having to remove the filling.
